

Q

UX

Smart, Seamless, and
Eco-Friendly Networking.

UX/UI Case Study

Aman Chourasiya, UX Research and UI Design

A digital business card is exactly what it sounds like: a digital version of the physical business cards that many professionals carry in their wallets.

The Digital Business Card Application is a smart, eco-friendly solution for seamless networking. It enables individuals and businesses to create, customize, and share digital business cards via QR codes, cloud storage, and real-time analytics. With a focus on usability, security, and scalability, this app replaces traditional cards, ensuring easy access, updates, and efficient contact management.

Interviewed some young users 🗨️

Three people, from different fields,
who experience *difficulties with
sharing contact information.*

To understand the users better I crafted *empathy
maps*. It helps me understand their needs, pain points,
and goals to design better solutions for them.

For me the challenge is not only sharing my business card but managing the cards I collect from others. For my business, I deal with multiple vendors and distributors for various needs, like raw materials (R1, R2, etc.). I often collect multiple business cards from prospects for each category, which makes finding the right card at the right time crucial.

Analytics would be valuable—tracking how many people have my card, how many shared it, recent shares, contacts made, and conversion rates. These insights would help me measure and optimize my networking efforts. I have come across CarsByte, which sort of does the same. But it lacks many important features that I described.

I think it's important to keep a record of past interactions with these contacts, including conversations, outcomes, and context. It helps me decide when to reach out and how to approach them.

Arpit
Patel

Another useful feature would be allowing someone to share my card as a recommendation, while notifying me when it's shared. This would let me follow up and potentially take the lead.

**Member of Technical Staff, Oracle
Bengaluru**

experience &
wisdom

Pain

- Pain of managing and locating the right card from a large collection is time-consuming, especially when dealing with multiple vendors and distributors for different categories like raw materials.
- Problem of Lack of context of interaction, without a way to record past conversations, outcomes, or context, following up with contacts becomes inefficient and ineffective.
- Pain of not knowing when someone shares his business card as a recommendation limits his ability to follow up and capitalize on potential leads.
- A lack of tools to track metrics like how many people have his card, who shared it, or the conversion rate of these interactions leaves him unsure of how effective his networking efforts are.
- Problem of Existing tools for short to satisfy, solutions like CarsByte partially address the problem but lack key features, making them insufficient for his needs.

Needs

- He needs a tool to easily store, organize, and quickly retrieve business cards by categories (e.g., raw materials) and relevance.
- He needs a feature to log conversations, outcomes, and notes about contacts to maintain context for future follow-ups.
- He needs secure storage to safely store and organize all business cards on a mobile device, ensuring they're accessible at any time.
- He needs easy updation of card details instantly without the need for reprinting, ensuring the information is always accurate and current.
- He needs a cost effective solution that eliminates the recurring expense of printing and distributing physical cards.
- He needs a solution for seamless distribution of cards that allow businesses and individuals to share their cards effortlessly using QR codes or digital sharing links.
- He needs a feature of Contact synchronization which Sync with existing contact lists to discover connections using the app and share updated business information.

Goals

- His goal is to replace Physical cards with fully digital system that eliminates the inefficiencies and drawbacks of physical cards.
- His goal is to make sharing and retrieving contact information fast, seamless, and hassle-free for businesses and individuals alike.
- His goal is to have a digital solution that enable users to store, organize, and access business cards offline while showing a warning if details might be outdated.
- His goal is to have a solution that allow businesses to distribute their digital cards widely, such as by sticking QR codes in shops or sharing them through other digital channels.
- His goal is to encourage professional updates via digital solution means to make it easy for users to notify their network when they start a new business or update their professional details.
- His goal is to reduce environmental waste by eliminating paper and plastic cards, aligning with modern sustainability goals and promote eco friendly practices.

I have seen my dad stack up business cards in a drawer so I guess they might be still around. And sharing information with others is a real customer pain point when I think about it now. So I think businesses face this problem

Problem with existing solutions are 1. You lose the card 2. Ease of access is not there, you might have the card but then you need it immediately and don't want to look for it in a bundle of 20 cards 3. The information on the card is outdated 4. There's printing cost which I assume would be nominal these challenges can be easily addressed using digital cards.

Add interactions like you click on the number and your dialer opens and you can call directly. Or click on WhatsApp number to open WhatsApp and send a message (in one click). Then I think a QR would be best suited to share these cards. Everyone uses QR code to pay thru UPI, same can be done to scan these qr to get a business card. Stick these QR at the shops.

Updating the cards is easy and efficient no need to print cards again And distribution is very easy scan a QR and there you have it. So having a product that allows you to share key information instantly would serve this purpose right.

Anas
Ali

Also the contact list is a big plus. Just sync your contacts and you can see who all have created business cards on the app. Which to some extent is counter intuitive because if you already have their contact why do you need a business card. But maybe someone's starting a new business and they want to let their connects know so they can share their card w them

***Business Associate, Accordian

experience &

Pain

- His problem is physical business cards are easily lost or misplaced, making it hard to find them when needed.
- He faces problem of searching through a bundle of cards to find the right one is time-consuming and inconvenient, as he has faced these issues in the past.
- He is concern about the details on physical cards, such as phone numbers or addresses, can quickly become outdated, leading to missed opportunities or incorrect follow-ups.
- Costing is a problem for him, but while printing costs might seem nominal, they add up over time, especially for businesses needing frequent updates or replacements.
- His pain is that traditional cards lack interactivity—users can't directly call, message, or navigate to shared links without manually entering the details.

Needs

- He needs a simple and quick way to share business information, such as through a QR code, that anyone can easily access.
- He needs interactive features like clickable options while dialing a number, opening WhatsApp, or navigating to a location directly from the digital card.
- He needs secure storage to safely store and organize all business cards on a mobile device, ensuring they're accessible at any time.
- He needs easy updation of card details instantly without the need for reprinting, ensuring the information is always accurate and current.
- He needs a cost effective solution that eliminates the recurring expense of printing and distributing physical cards.
- He needs a solution for seamless distribution of cards that allow businesses and individuals to share their cards effortlessly using QR codes or digital sharing links.
- He needs a feature of Contact synchronization which Sync with existing contact lists to discover connections using the app and share updated business information.

Goals

- His goal is to replace Physical cards with fully digital system that eliminates the inefficiencies and drawbacks of physical cards.
- His goal is to make sharing and retrieving contact information fast, seamless, and hassle-free for businesses and individuals alike.
- His goal is to have a digital solution that enable users to store, organize, and access business cards offline while showing a warning if details might be outdated.
- His goal is to have a solution that allow businesses to distribute their digital cards widely, such as by sticking QR codes in shops or sharing them through other digital channels.
- His goal is to encourage professional updates via digital solution means to make it easy for users to notify their network when they start a new business or update their professional details.
- His goal is to reduce environmental waste by eliminating paper and plastic cards, aligning with modern sustainability goals and promote eco friendly practices.

I want to personalize my card with a short introduction. - Updating details on the card should be hassle-free. Additionally, all previously shared links should automatically reflect the updated version

There should be two-way integration with social and professional platforms. For example, the card should seamlessly embed my LinkedIn or Instagram, and it should also allow easy linking (may be via short URLs) of my card to these platforms.

I believe the card will have dedicated sections for websites, socials, bios, etc., but it should adapt if one or more elements are missing. Not everyone will have everything, so the card should intelligently display the available information in the most visually appealing way.

While saving a card, providing an option to add a short description could be useful. Use Case: I attended a conference and met many people whom I may not contact immediately but might reach out to after several months. Having an option to add a short description while saving a card could be helpful when I am initiating a conversation with the person in future.

Also providing insights through tracking could be very helpful. For example: a. Knowing how many people have my card saved in their app. b. Seeing how many people have viewed my card in the last 7 days. c. Tracking the number of clicks on my embedded links (e.g., GitHub, Codeforces, etc.).

Categorizing contacts by industry or stream could offer a clear view of all the saved contacts.

Founding Engineer, Zenskar

experience &
wisdom

Pain

- Pain of personalizing and updating the card, adding a personal touch like a short introduction is important, but current solutions lack flexibility and convenience for this. Updating information across previously shared links is a manual and tedious process.
- Problem is current tools don't seamlessly integrate with social and professional platforms like LinkedIn or Instagram, making it hard to showcase a complete professional profile or link the card to these platforms effectively.
- Also many digital card solutions fail to adapt to missing elements, leaving the design incomplete or cluttered if some fields like social media links or bios are not provided.
- Major concern is that users have no visibility into how their card is being engaged with—such as how many people have saved it, viewed it recently, or clicked on embedded links.
- Problem is after saving multiple cards, especially during events or conferences, it becomes difficult to remember who the person is or why the connection was significant.
- Some solutions lack of categorization by industry or stream makes it harder to organize and retrieve saved contacts efficiently.
- Missed opportunities arise because existing solutions don't offer recommendations for relevant connections based on saved cards or user profiles.

Needs

- He need an option to easily add a short, unique introduction to their digital card for a more personal and professional touch.
- He need seamless way to ensure that updated information reflects on all previously shared links, eliminating manual adjustments.
- He need a feature to embed and link to social and professional platforms (e.g., LinkedIn, Instagram) directly on the card, and vice versa, using short URLs for accessibility.
- He need an intelligent design system that adjusts visually to display only the available information in an appealing format.
- His needs are tools to track card engagement, including:
 - Number of people saving the card.
 - Views over specific time periods (e.g., last 7 days).
 - Clicks on embedded links.
- Need a feature to categorize saved contacts by industry or profession for better organization and retrieval.
- He need an option to add short descriptions or notes while saving a card, helping users recall interactions when reconnecting after a long time.
- He need a system for verifying user authenticity to build trust and confidence when sharing personal and professional details.

Goals

- His goal is to create a personalized digital card that can be easily updated, shared, and accessed across platforms.
- To Gain insights into how the card is being used—who has saved it, clicked on links, or viewed it recently—to improve networking efforts.
- Solution that save and categorize cards with added notes for better recall and future communication.
- To ensure user profiles are verified to create a safe and reliable environment for sharing personal details.
- Goals is to have a better user experience that provides a flexible, intuitive design that adapts to user preferences and eliminates common pain points in digital business card management.

Secondary Research

I have *gathered data* from various sources. This helped me understand market trends, user behaviors, and existing gaps in the digital business card space.

How digital business card (DBC) can help businesses become greener

Updated: Sep 15, 2022, 23:10 IST

PRINT

AA

FOLLOW US

According to a report, 10 billion business cards are created annually, with 8 billion discarded within a week. This equates to 27 million cards printed each day. These account for 88% of the cards created, resulting in the loss of over 7 million trees. One of the easiest ways to make a difference is to move up to a digital business card (DBC).

The benefits of moving to DBC go beyond being environmentally responsible.

"In today's time when most companies are working remotely, client-facing professionals are looking for ways to exchange their contact information digitally. DBC is helping people with this by providing them with an advanced and feature-loaded technology that helps them network effortlessly and do their business with ease," said the founder of Sailax, Ajay Sharma.

These DBCs can be customised to suit your needs, individual styles, and most importantly, to fit into brand guidelines and templates.

They also feature dynamic QR code creation, business card analytics, email signature, a mini website, technology for turning paper cards into digital business cards, tracking card and QR scanner traffic, and managing contacts in one place.

People's opinions on digital business cards, instead of traditional paper ones, might suggest a changing trend rather than a fading tradition. We asked respondent how interested they are in using digital business cards (e.g., online, QR codes, etc.). Overall, one in five adults (20%) are interested in having digital cards, which is not wildly different from the proportion of 23% having ever given physical cards out. Interest is highest among 16-34s, with nearly 4 in 10 (37%) of this cohort interested in having digital business cards. This compares to 20% of those aged 35-54, and just 7% of those aged 55-75.

So, maybe it's not time to write-off business cards just yet.

Statistics from the World

40+ Response

I have listed the questionnaire in a google form and conducted a quick *survey* to understand potential user's experiences and preferences.

What is your preferred method of sharing contact information?

51.2%

of people prefer Digital business card solution.

What is the biggest challenge you face with your current methods of sharing contact information?

Do you prefer your digital business card to be :

get thrown away in less than a week.

Key
insights
gained
from
research

It bridge the gap between raw data (like user quotes) and actionable decisions.

Users struggle with managing and retrieving business cards, whether physical or digital. A lack of categorization and contextual information often leads to inefficiencies. They highly value tools that allow for organized storage, categorization by industry or purpose, and the ability to add contextual notes for easier recall of past interactions.

card management
& organisation

Quick sharing methods, such as QR codes, are crucial for users seeking seamless networking. Interactive features like clickable links for calling, messaging, or navigation further enhance usability. Users also want to monitor engagement by seeing who has saved, viewed, or interacted with their cards, enabling better follow-ups.

ease of sharing
& engagement

Many users face challenges with rigid designs that do not adapt when some fields, such as social media links or bios, are missing. They desire a dynamic and flexible card design that adjusts to available information while maintaining a professional appearance, ensuring consistency and usability.

dynamic &
adaptive design

Integration with professional and social platforms like LinkedIn and Instagram is a critical need. Users want to showcase their profiles dynamically and link their cards to external platforms, creating a cohesive networking experience. Embedded links within the card allow for more comprehensive professional visibility.

platform
integration

Many users are motivated to transition to digital business cards due to the environmental impact and costs of physical cards. Digital solutions not only align with sustainability goals but also offer long-term cost benefits, making them an attractive alternative.

environmentally
conscious users

Detailed analytics are crucial for users to measure the effectiveness of their networking. Tracking metrics such as shares, clicks, and conversions allows users to evaluate their outreach efforts. These insights empower them to optimize their strategies and make data-driven decisions to improve connections.

analytics
& insights

CONCLUSION

The interviews reveal a clear demand for a user-friendly, feature-rich digital business card solution that addresses the inefficiencies of traditional cards. The ideal solution should focus on personalization, seamless sharing, intelligent design, and advanced analytics. Additionally, integrating eco-friendly practices and AI-driven features can provide significant value to users, enabling them to optimize their professional networking efforts effectively. This solution not only aligns with user needs but also taps into the growing trend of digital transformation and sustainability.

Problems we found out

specific issue that needs solving, highlighting user challenges and gaps in existing solutions.

- Users miss opportunities to expand their professional network because they feel shy or hesitant to ask for contact information..
- They face difficulty in organizing and retrieving contacts from the past events.

- Users struggle to remember the context of people, especially from large events or conferences.
- Traditional business cards are easily lost, hard to update, and require costly reprints.

- They struggle with high costs and inefficiencies in traditional methods
- Businesses face difficulty in updating employee details

- Users lack visibility into card activity and engagement.
- Traditional and existing digital solutions lack interactivity and seamless sharing

detailed blueprint of the design of each solution prioritized.

Solutions we must opt

- Introduce digital cards that are always accessible, allow real-time updates, and eliminate printing costs.
- Easy creation and customization by providing inbuilt templates.

- Adding Interactive features like one-click options to call, message, or open shared links easily.
- Enabling easy sharing through QR codes and location-based discovery for enhanced connectivity.

- Offering analytics to track views, saves, link clicks, and recent interactions, providing actionable insights for networking.
- Providing unique username I'D, enabling users to directly search by username

- Adding options for short descriptions and interaction history while saving contacts
- Proving contact synchronization for better engagement with stored contacts.

User Personas for better understanding

Aryan Shetty

30, Male
Business Owner

About

Ahan Shetty is a forward-thinking businessman who manages a mid-sized company in Delhi. He is environmentally conscious and strives to implement sustainable practices in his business operations. Ahan frequently hires new employees and manages a growing workforce. He values efficiency and seeks innovative digital solutions to streamline administrative tasks, such as employee ID card management.

"I want a smart, eco-friendly solution that saves time, reduces costs, and reflects my commitment to sustainability."

Goals

- Implement a digital solution for sharing and managing professional contact information.
- Streamline employee ID card issuance and updates through a digital system.
- Enhance operational efficiency while promoting sustainability within his company.

Motivation

- Transition to eco-friendly solutions to reduce the environmental impact of paper-based business cards.
- Simplify and modernize the process of managing employee ID cards.
- Save costs associated with printing and reprinting physical cards.

Behaviour

- Proactively seeks digital tools that align with his business and environmental values.
- Regularly onboard new employees and deals with administrative challenges.
- Prefers simple, user-friendly solutions with long-term benefits.

Frustration

- Paper business cards contribute to environmental harm and are expensive to produce.
- Traditional ID card management systems are inefficient and difficult to scale.
- Managing and keeping track of physical cards for employees and business contacts is cumbersome.

Abhinav Mayya

25, Male
Software Developer

About

Abhinav is a Developer in an IT company. He frequently attends networking events, Hackathons, and client meetings to build connections. Abhinav values convenience and professionalism in how he presents himself and connects with others. He is a tech enthusiast and always curious to find better ways to connect with others professionally without any hassle.

"Networking should be smart, seamless, and hassle-free—just like the way we code."

Goals

- Simplify the process of sharing and updating professional details.
- Create a lasting impression with innovative and professional tools.
- Enhance networking efficiency, especially during events and hackathons

Motivation

- Build meaningful professional connections quickly and effectively.
- Use modern, tech-savvy tools to represent himself as a forward-thinking professional.
- Stay organized and streamline how he shares and manages contact information.

Behaviour

- Regularly attends events and actively seeks new professional connections.
- Frequently explores and adopts new technologies to improve his workflows.
- Values professionalism in how he presents himself and interacts with others.

Frsutration

- Traditional business cards are easily lost, outdated, or inconvenient to manage.
- Difficulty remembering the context of connections made during events or meetings.
- Lack of a seamless and hassle-free way to exchange and store contact information.

Understanding user needs visually

To better understand users' needs, emotion and behaviors, I created **Empathy mapping** chart. It helps me with what the user says, thinks, feels, and does to create better user-centered solutions..
